Robert Warren

Dayton, OH • (626) 872-4171 • robertcwarren1@gmail.com • linkedin.com/in/robert-c-warren

Professional Summary

Systems & Application Support Specialist with deep experience resolving complex Tier 2/Tier 3 infrastructure and software escalations. Proven ability in log-driven root cause analysis (RCA), SQL Server database diagnostics and Windows OS internals. Skilled in developing automation scripts (PowerShell, Python) to streamline system administration and bridge technical operations with software engineering teams.

Core Competencies

- ---

  Operating Systems & Low-Level Diagnostics: Windows Server / 10 / 11, Sysinternals Suite (Process Explorer, Procmon), Windows Event Viewer, Crash Dump Analysis, USB & Driver Stacks (libusbK, peripheral enumeration).
- **Application Triage & Data Layers:** SQL Server (Runtime Triage, Query Profiling, Execution Log Analysis), REST API Debugging, Payload Validation, Schema Integrity, Application-Layer Debugging.
- **Identity, Access & Networking:** Active Directory, Azure AD, SSO, MFA, DNS, VPN, TCP/IP, Routing Fundamentals.
- **Scripting & Systems Tooling:** PowerShell, Python, Go, SQL, TypeScript, Node.js, ServiceNow, Oracle Ticketing.

Professional Experience

Midmark Corporation **Versailles, OH**

Associate Technical Service Specialist *Jun 2024 – Sep 2026*

- **High-Tier Escalations & Root Cause Analysis:** Fast-tracked within three months to manage complex Tier 2/Tier 3 software escalations, utilizing Windows Event Viewer, Sysinternals, and registry tracing to isolate and resolve ambiguous application-layer crashes, driver conflicts, and operating system faults.
- **Database & Data Integrity Diagnostics:** Conducted root-cause investigations into SQL Server runtime issues, troubleshooting query timeouts, database connectivity drops, and batch data synchronization failures across distributed client-server architectures.
- **Identity & Access Management (IAM):** Resolved authentication and directory service issues across Active Directory and Entra ID (Azure AD), managing security groups, user provisioning, and troubleshooting SAML/SSO token handshakes and MFA configurations.
- **Operational Scripting & Automation:** Developed custom PowerShell and Python scripts to automate log collection, parse telemetry outputs, and execute bulk configuration updates, significantly cutting down resolution times for recurring technical incidents.
- **Engineering Liaison & Defect Triage:** Collaborated directly with software development teams to escalate verified bugs, providing complete reproduction steps, network traces, crash dumps, and database logs to

accelerate patch releases.

- **SOPs & Infrastructure Documentation:** Authored standardized deployment blueprints, technical runbooks, and internal SOPs to document complex environment workarounds, reducing escalation cycle times across the technical team.

Quality Boat Salvage **Pasadena, CA**

Data & Operations Systems Specialist *Mar 2023 – Jun 2024*

- **Data Pipeline Automation:** Architected automated inventory synchronization pipelines and data-handling scripts, reducing data sync cycle times by 20% while eliminating state desynchronization.
- **Cloud Access & Identity Administration:** Administered cloud directory accounts, access controls, multi-factor authentication (MFA), and data integrity standards across operational tools.
- **SOPs & Technical Documentation:** Authored operational runbooks and system troubleshooting SOPs to standardize staff onboarding and operational technical procedures.

Pyramid Consulting, Inc. **Remote / Los Angeles, CA**

IT Systems Engineer (Contract) *May 2022 – Nov 2022*

- **Enterprise Systems Support:** Delivered enterprise L2 systems support for distributed Windows and macOS endpoints, corporate VPNs, and AWS identity/access configurations.
- **Application & API Triage:** Triaged web application performance degradation, REST API failures, and runtime defects utilizing browser developer tools, HTTP request inspection, and server-side log output.
- **Service Desk & Incident Resolution:** Maintained a 95%+ first-contact satisfaction rating handling escalated technical tickets within enterprise ServiceNow environments.

Technical Projects & Systems Engineering

Portsy – Distributed File Synchronization & State Engine | *Go, Wails, TypeScript, Firestore*

- Architected a lightweight desktop background synchronization utility in Go utilizing low-level OS file-system event listeners to detect real-time file mutations.
- Engineered conflict-resolution algorithms to handle file locks, concurrent file writes, and network disconnects, guaranteeing state integrity during cloud backup synchronization.
- Demonstrated end-to-end systems programming competencies: process lifecycle management, client daemon reliability, and authenticated cloud state replication.

EcoCommerce – Scalable Relational Data Platform & API Service | *Node.js, TypeScript, React, Prisma, Firestore*

- Designed and deployed a full-stack data platform (400+ indexed entities) structured around robust backend REST APIs and strictly typed relational data schemas.
- Implemented server-side request validation, structured error-handling middleware, and database query optimization to prevent timeouts and handle malformed payloads.
- Maintained live production environment (ecomcommerce.earth), managing DNS records, SSL certificates, client-server state consistency, and API endpoint availability.

Education

Glendale Community College **Glendale, CA**

Associate of Science (AS), Computer Science

Icon Collective **Los Angeles, CA**

Certificate in Digital Music Production *2014 – 2015*
